DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in Application No. 09/345,749.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 24-27 are rejected under the judicially created doctrine of double patenting over claims 4-9 of U. S. Patent No. 6,191,397 since the claims, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common s, if allowed subject matter, as follows: claims 4-9 in the parent patent set forth forming a film on a substrate, exposing the film to a set amount of light, heating the exposed film and measuring a thickness of the exposed area and an adjacent

Art Unit: 3742

unexposed area. These steps are also found in claim 24 in the instant application.

Claim 24 also sets forth the step of obtaining a heating temperature from a measure of the film thickness and a relationship between film thickness differences, which has been obtained beforehand. The instant claims set forth the step of controlling the heat source on the basis of a calculated difference and a before hand obtained difference. The patent 397' sets forth in claim 6 for instance, heating of the resist film while the control conditions of the heating apparatus is being adjusted in response to the obtained heating temperature". It is clear that both the instant claims and the patented claims set forth set forth temperature control of a wafer based on a calculated difference and thinness and a predetermined difference in thickness and its relation to temperature of the heat source.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application, which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.
